

Investigative Outbreak Report. Dynamical Fever

Problem: A disease called Dynamical Fever (DF) causes near-annual outbreaks in dogs and people in Paris. DF became a reportable disease in Paris in 2016, a veterinary vaccine became available in 2018 and a human vaccine in 2021. Investigate the available case data from 2016-2023 in order to advise the Ministry of Health on the most effective human/dog vaccination policy to adopt in 2024 to promote elimination of DF in all populations.
